Table 1: Ecov parameter estimates, standard deviation, and rho for each EM for projection

EM Name	OM Ecov	Mean Ecov	Percent Change	Ecov Standard Dev.
AR(1)	-0.397	-0.464	16.877	0.088
Low	-0.397	-0.455	14.610	0.089
Medium-Low	-0.397	-0.443	11.587	0.083
Medium	-0.397	-0.336	-15.365	0.093
High	-0.397	-0.291	-26.700	0.106

```
## 'summarise()' has grouped output by 'EM_name'. You can override using the  
## '.groups' argument.
```

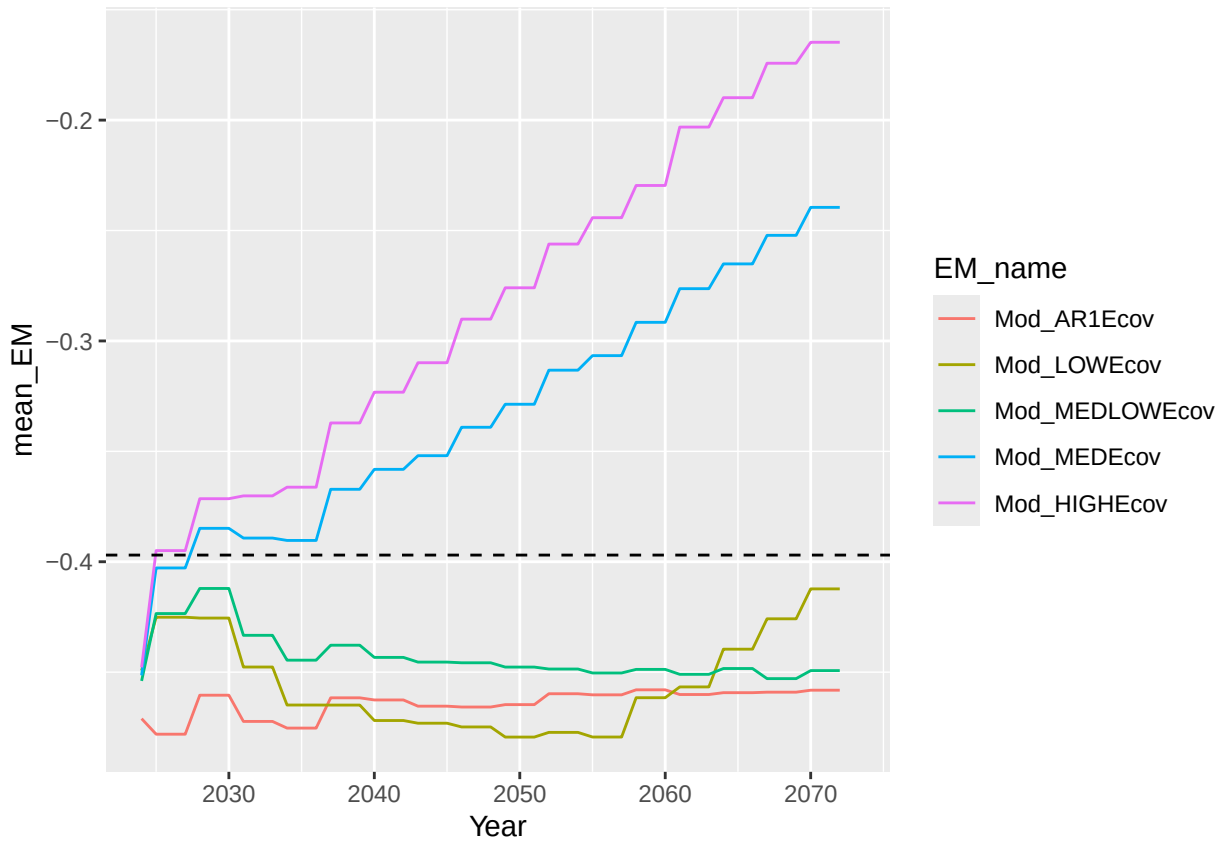

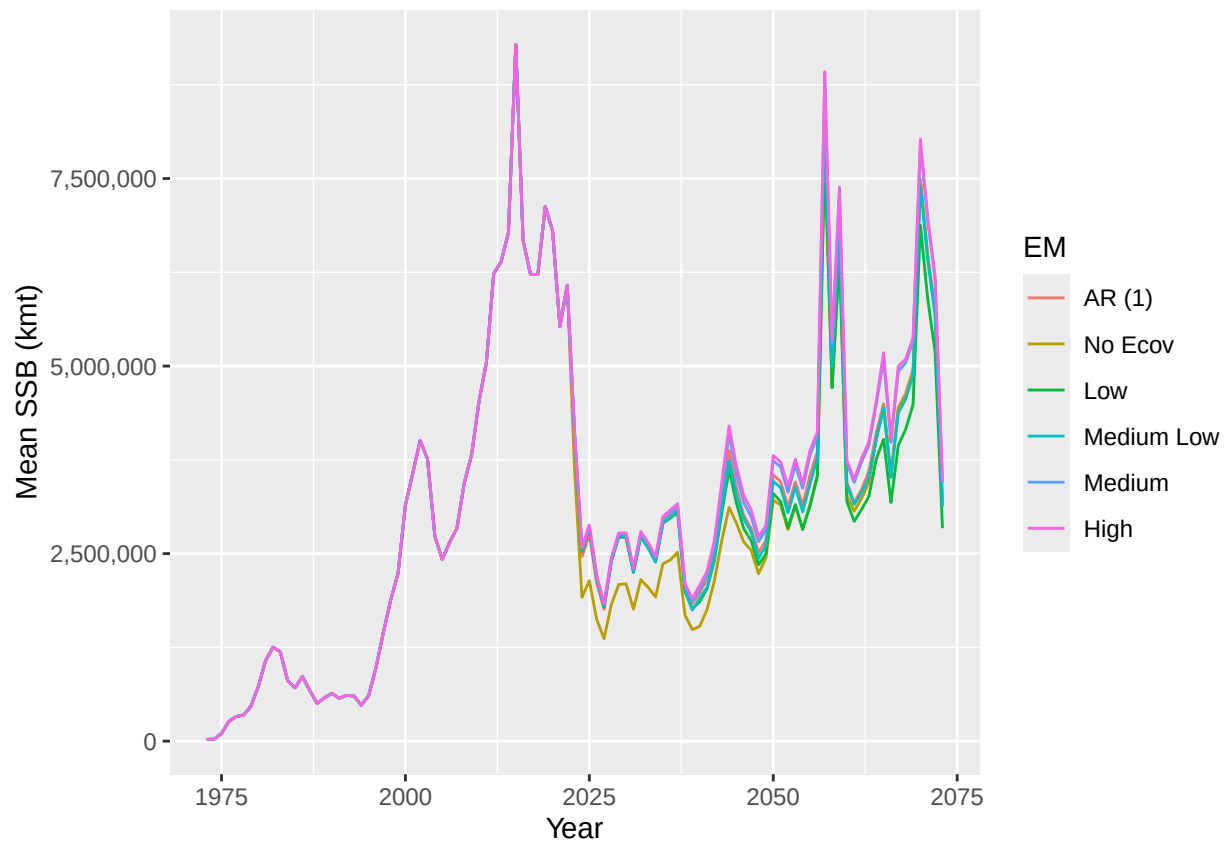

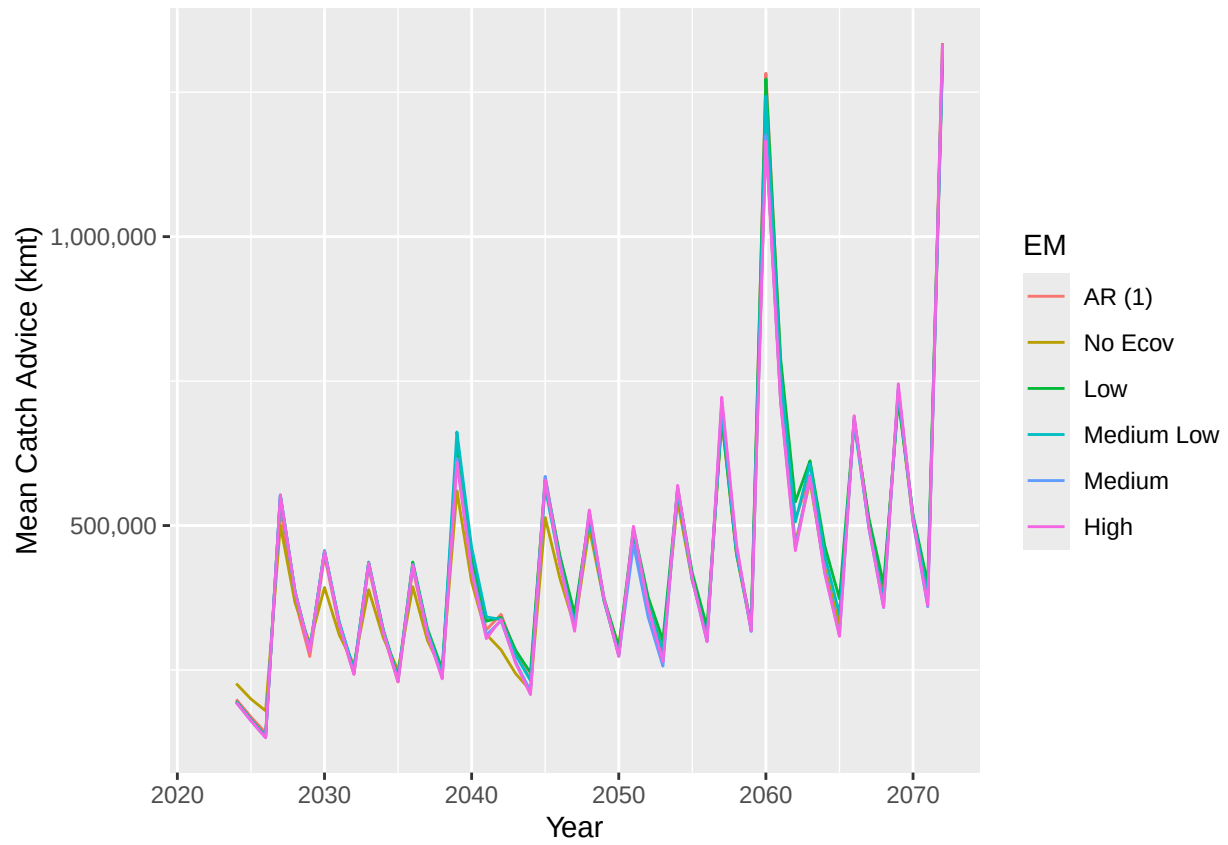

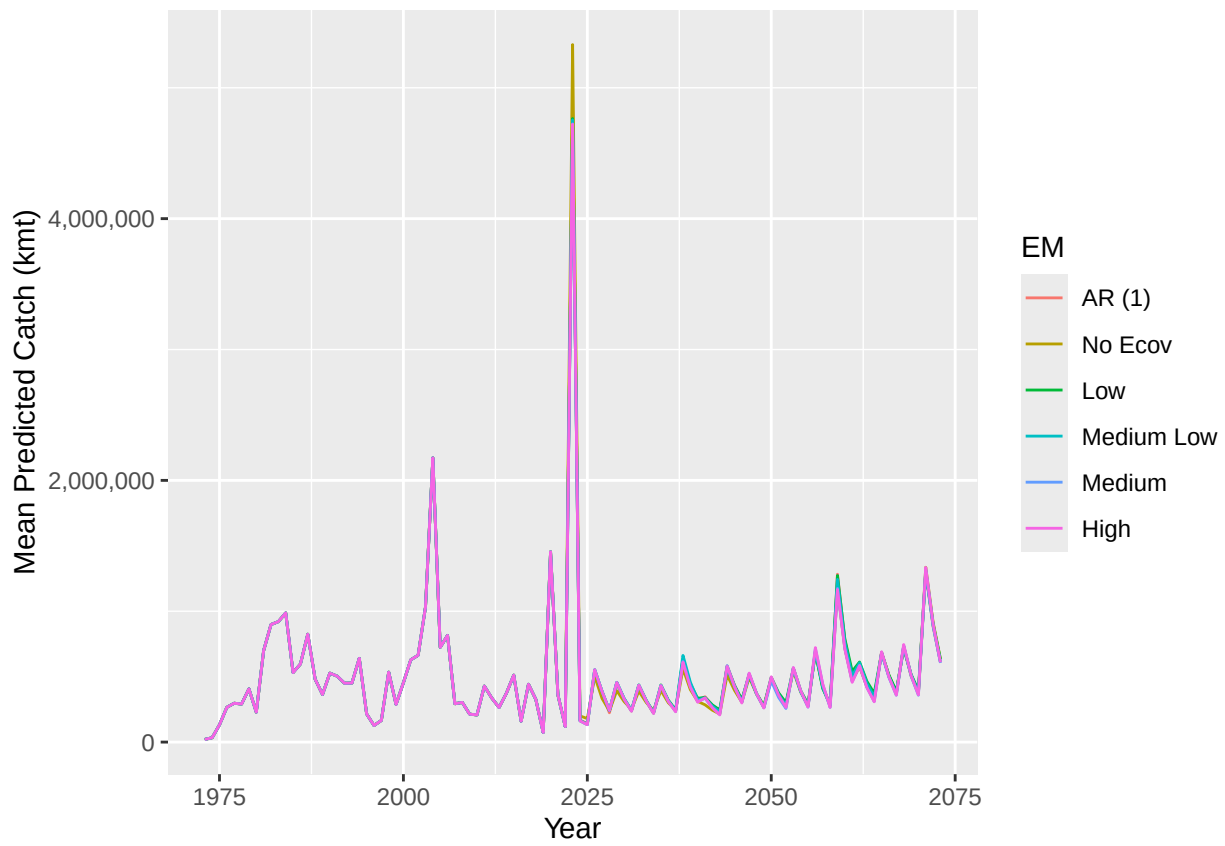

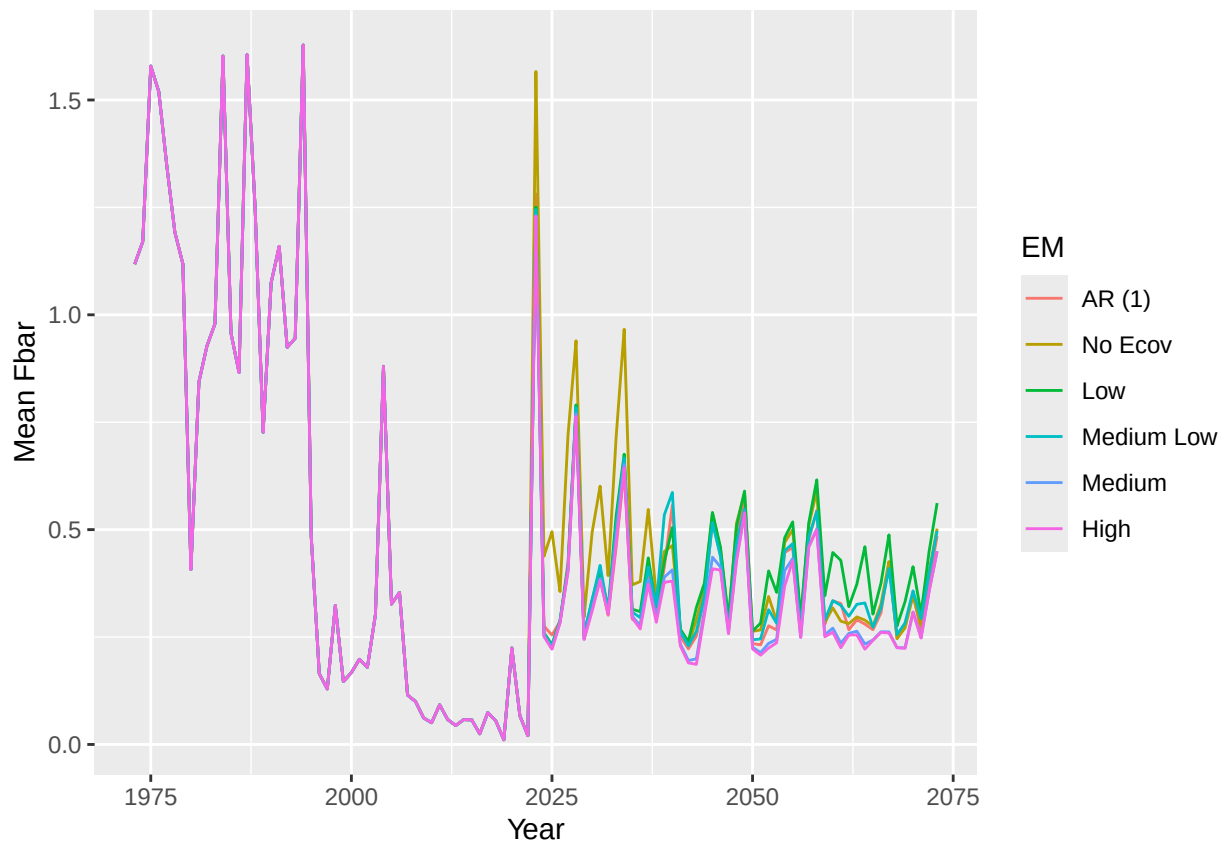

Figure 1: Estimated ecological covariates in for the different temperature projection choices in the EM compared to the “true” value in the OM.

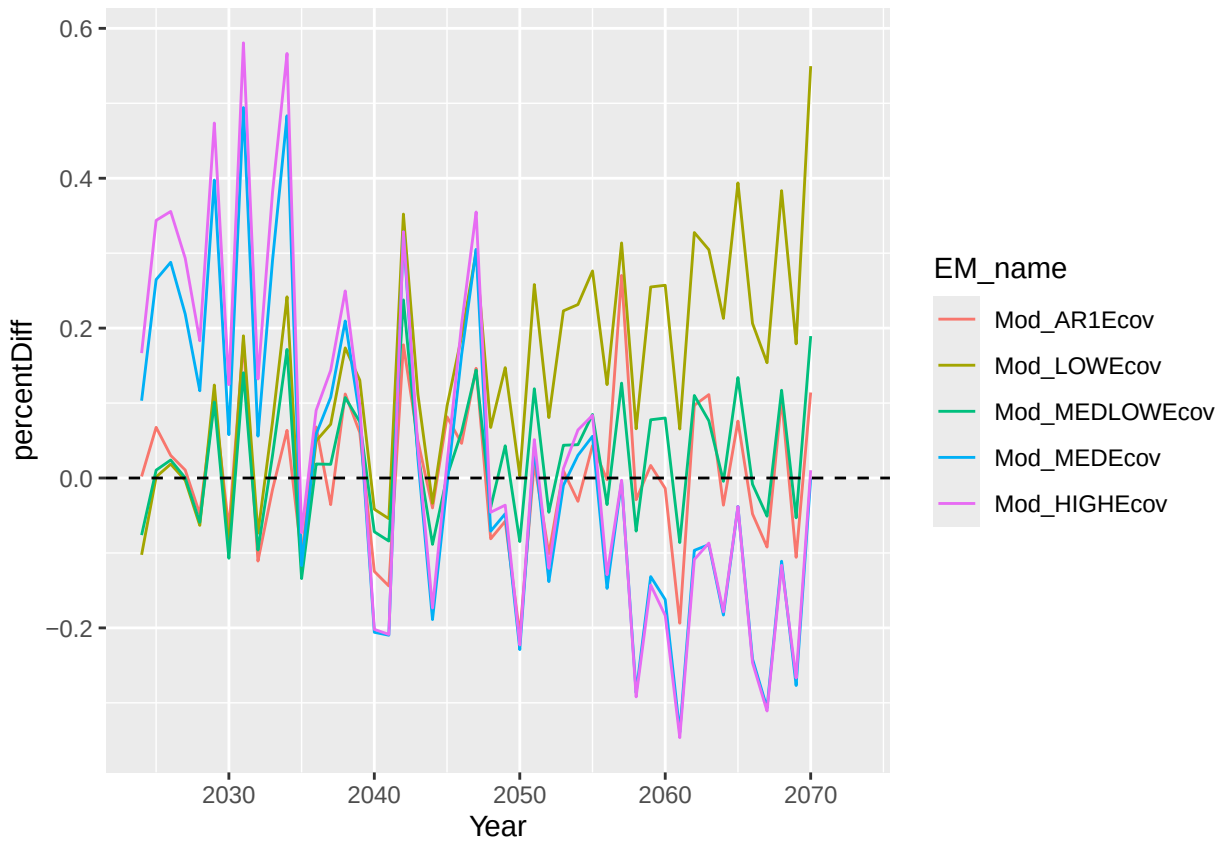

Figure 2: Percent difference of the calculated recruitment per assessment year in each EM compared to the OM.

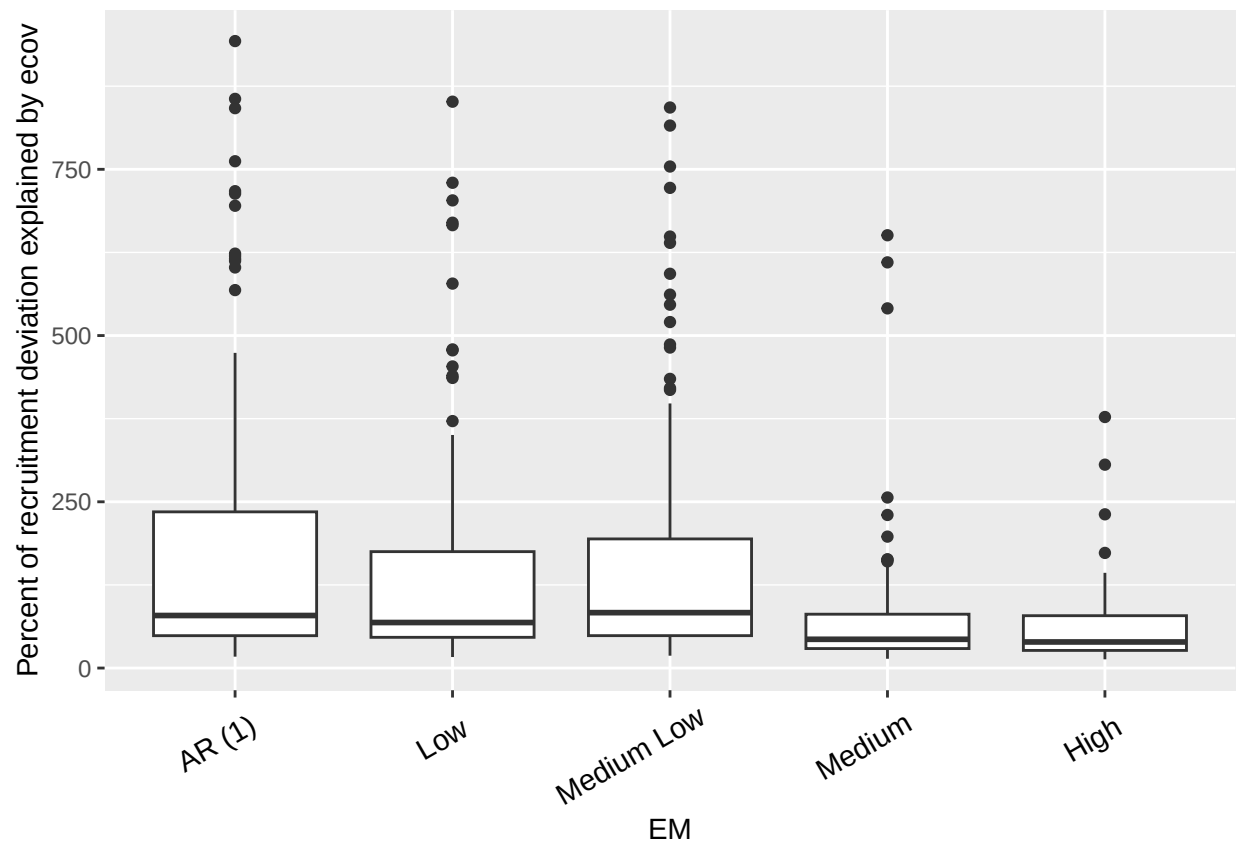

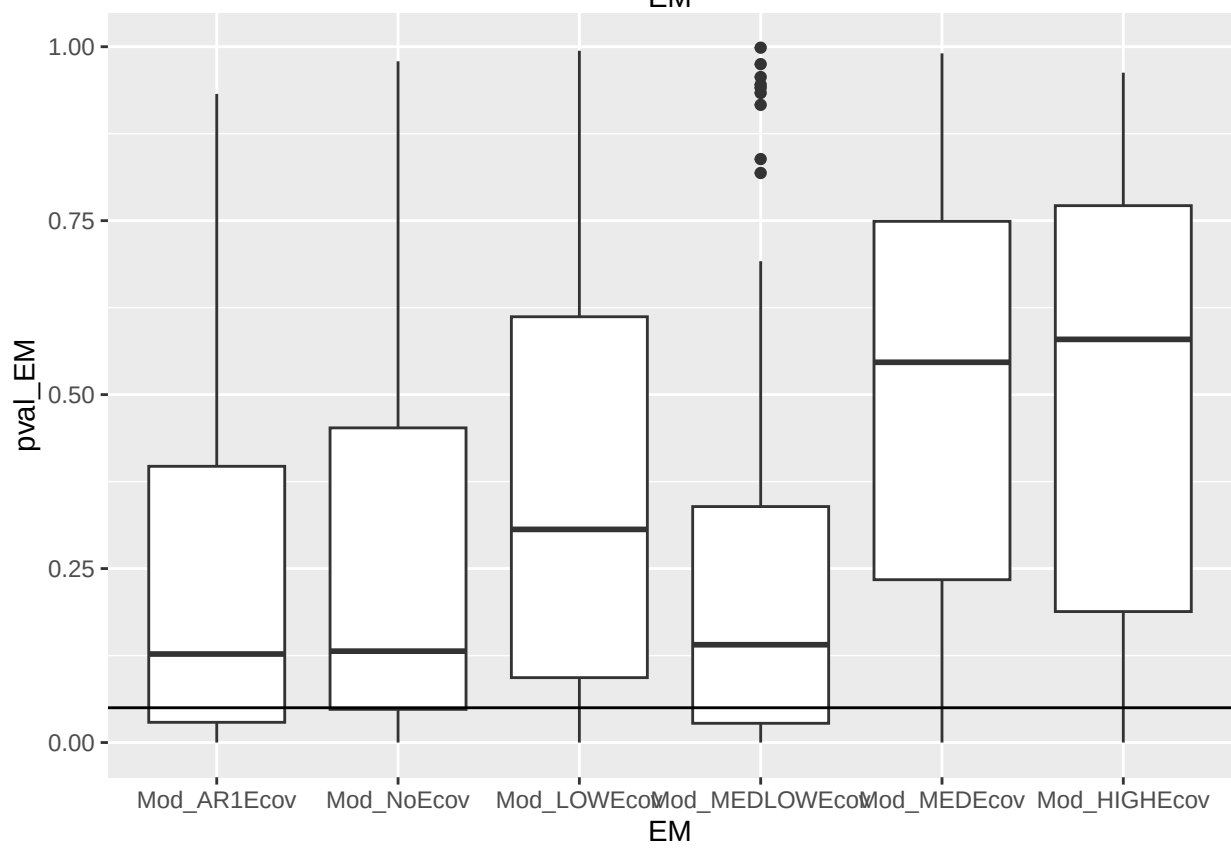

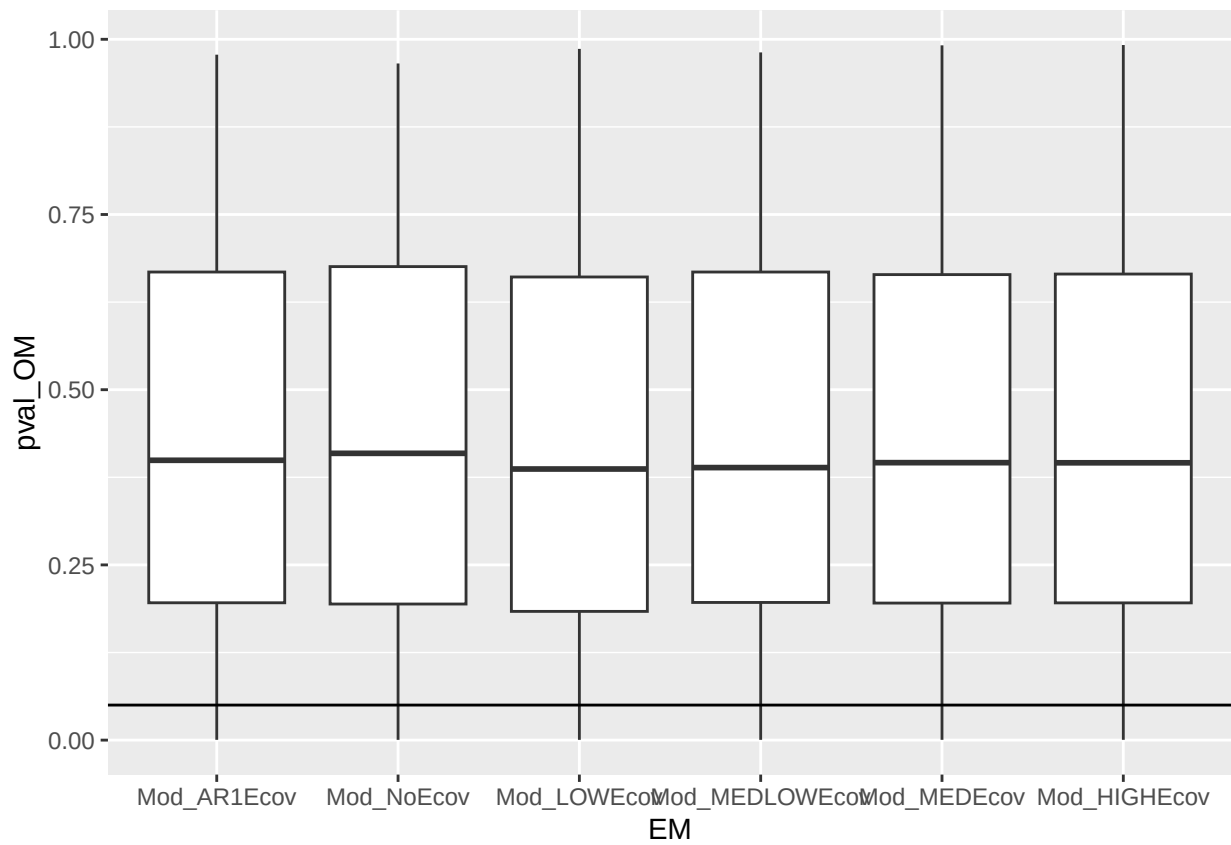

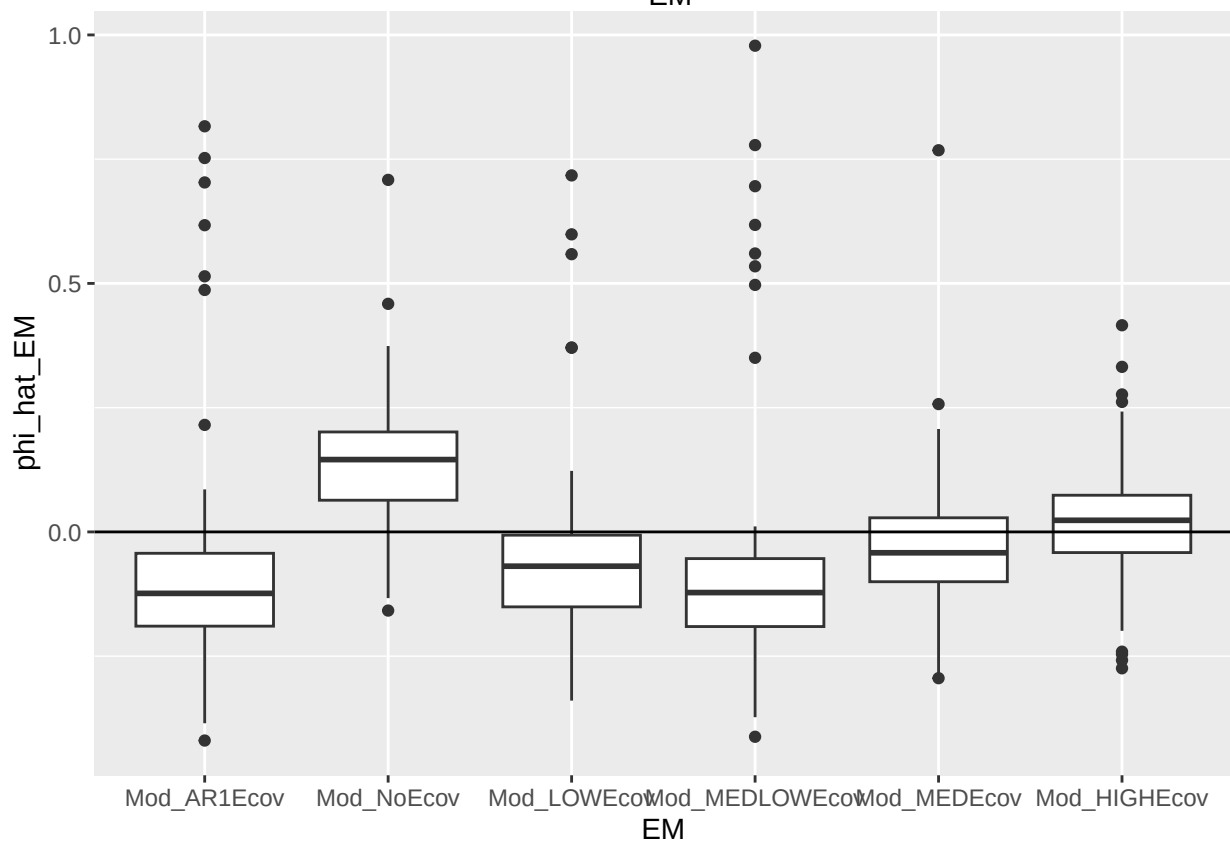

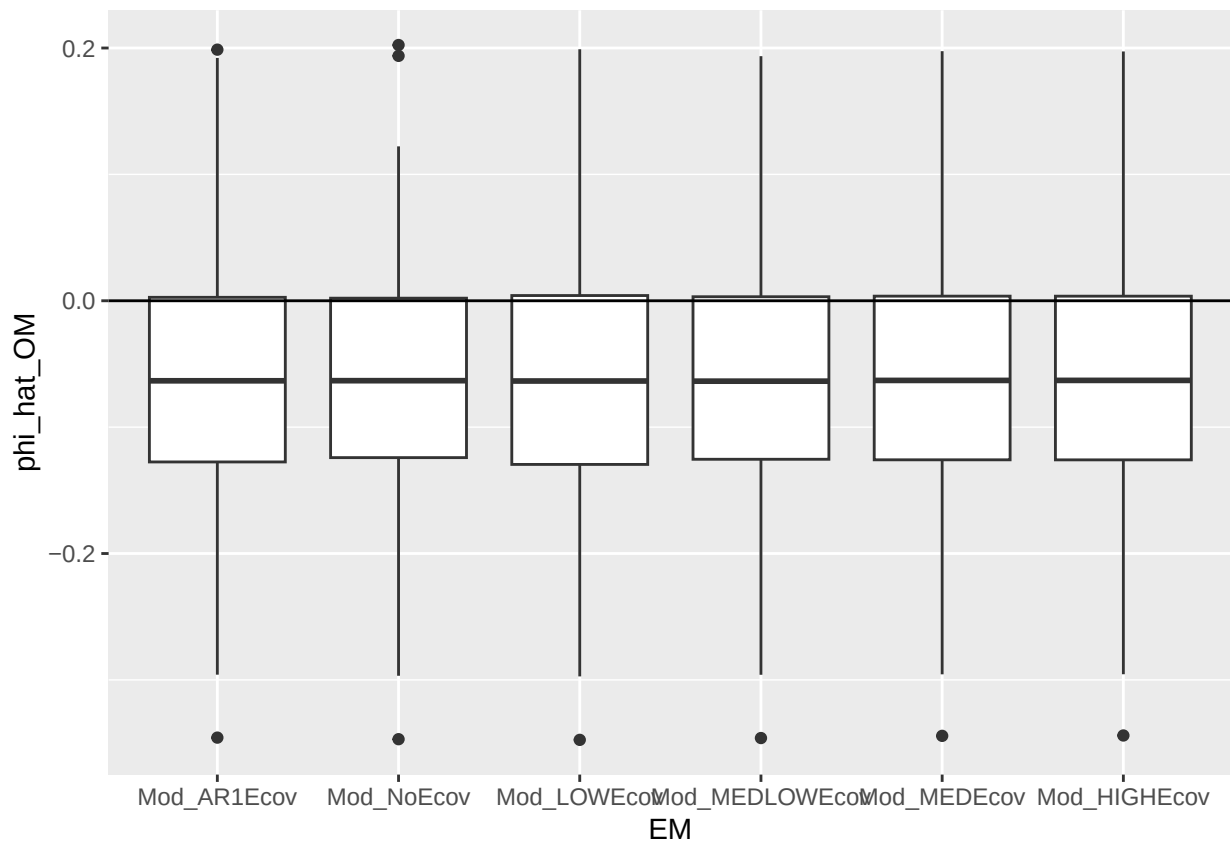

Figure 3: Percent of recruitment deviation EXPLAINED BY THE ECOV IN EACH MODEL. MAKE SURE YOU CHANGE YOUR RESULTS PARAGRAPHS TO SAY THIS. ALSO FIX THIS BASED ON CHENG EMAIL

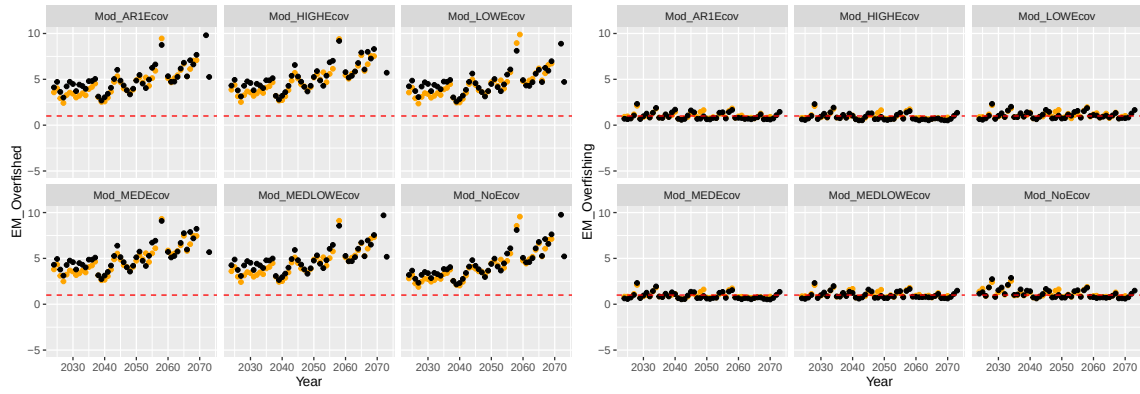

Figure 4: Overfished (left) and overfishing (right) status over the projected time series for each EM. Overfished and overfishing thresholds are shown in the horizontal red line

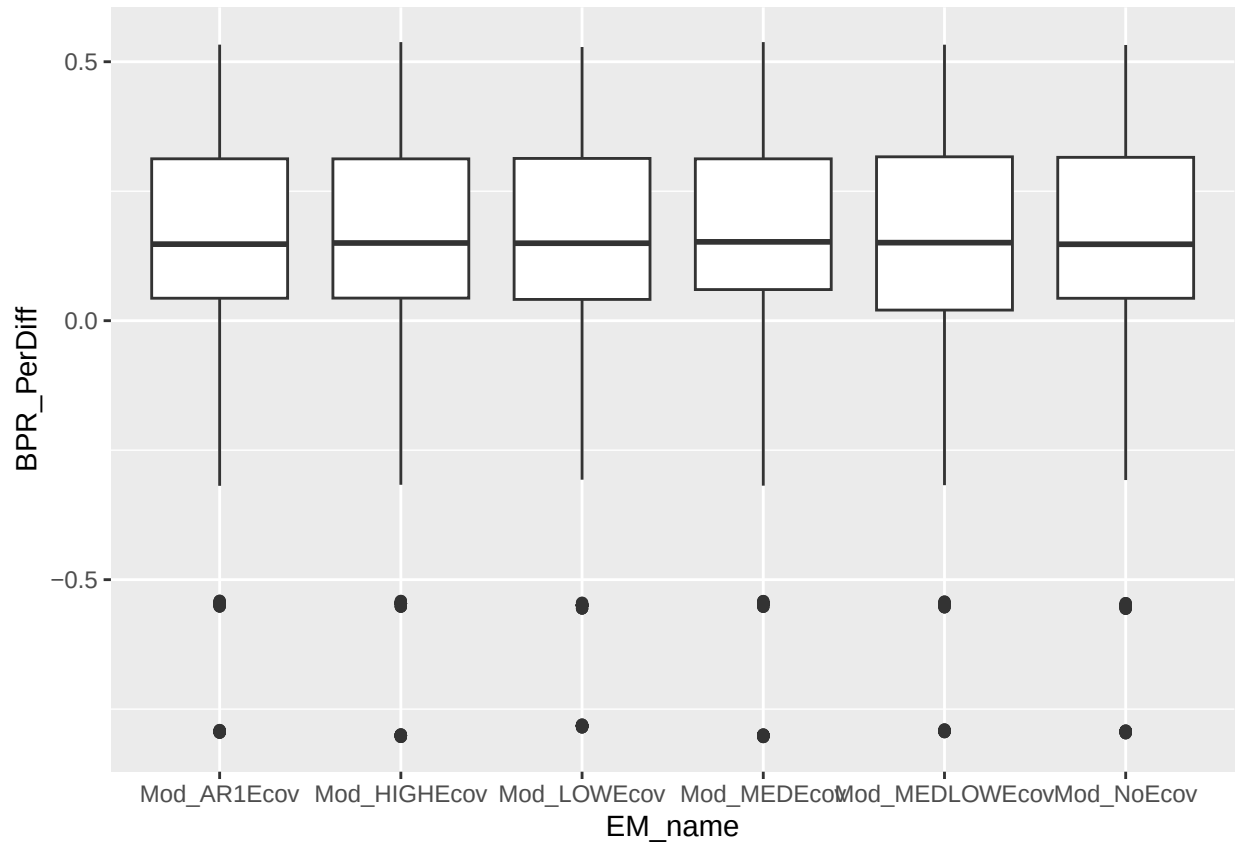

Figure 5: Percent difference of the calculated FXSPR reference point in each EM compared to the OM.
